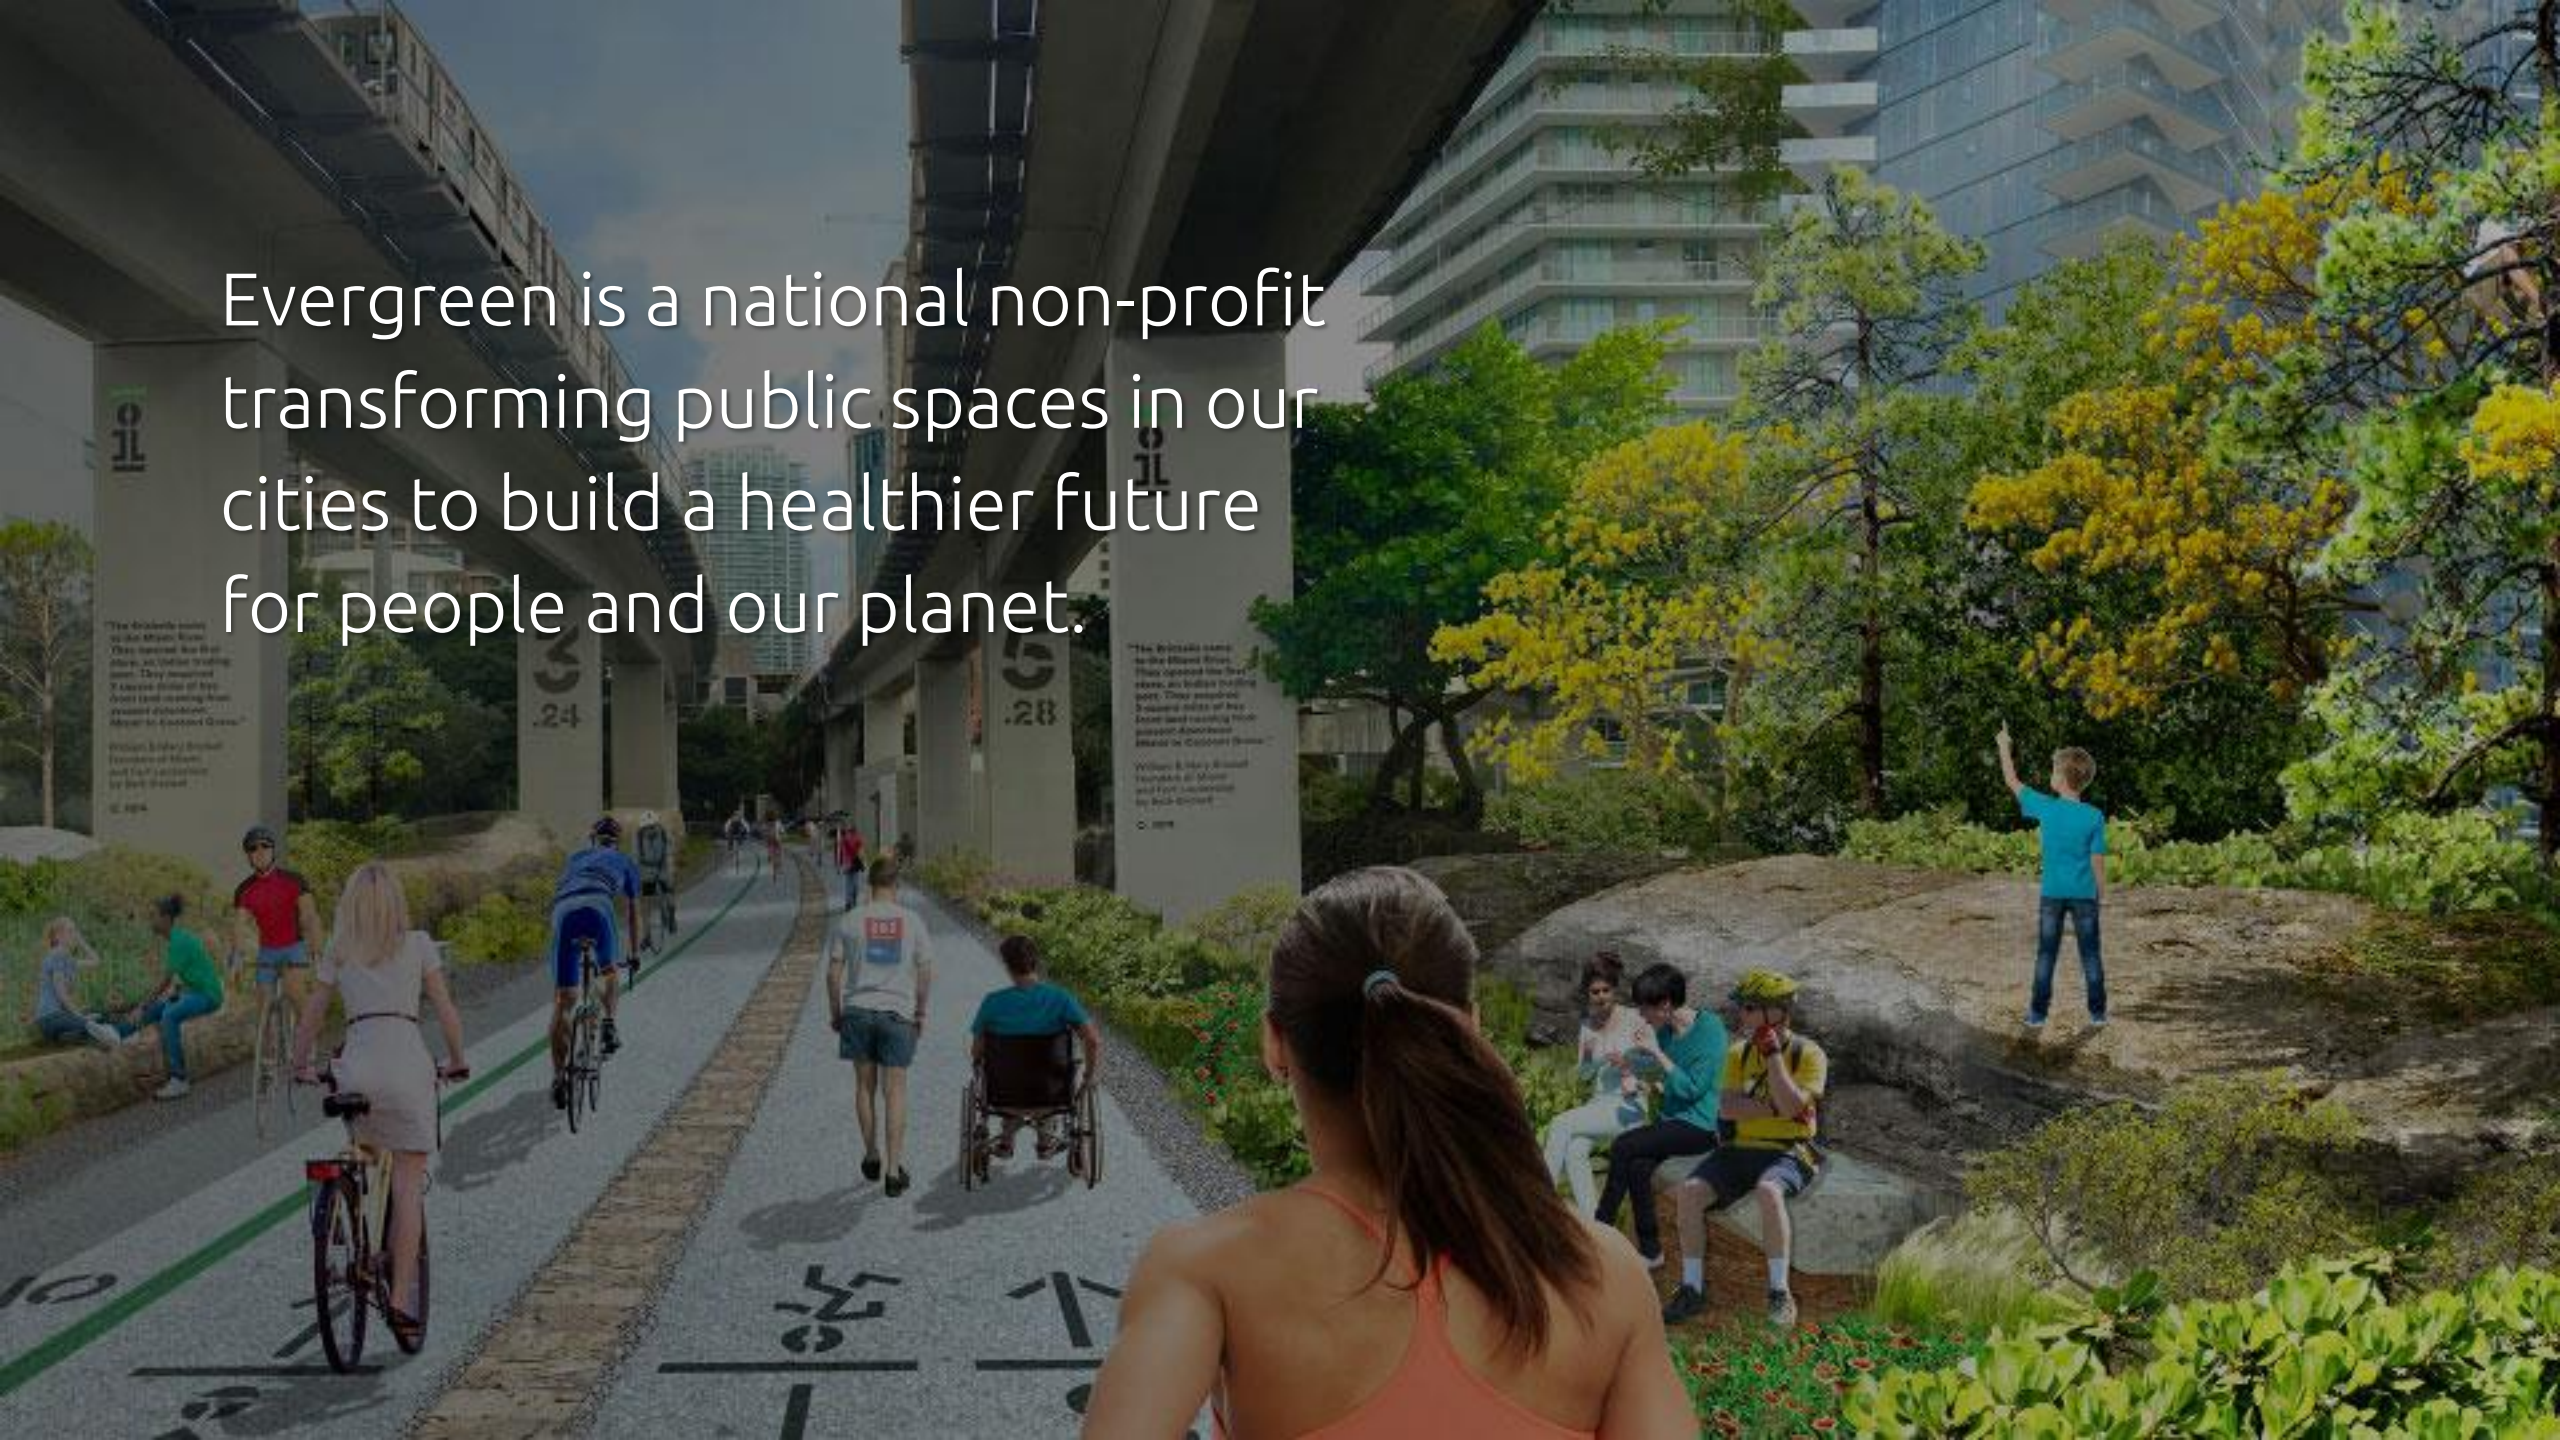
Community Solutions Network

Program Overview

EVERGREEN



Evergreen is a national non-profit transforming public spaces in our cities to build a healthier future for people and our planet.

Evergreen Brick Works is an example and a showcase of how that comes to life and is made possible.

About Our Program

The **Community Solutions Network** is a program led by Evergreen in partnership with Open North.

Our team works with communities to build capacity and improve the lives of residents using data and connected technology approaches.

EVERGREEN OPEN NORTH Infrastructure Canada Canada

What We Do

1. We make information about community innovation and data and technology approaches accessible to everyone.

2. We help communities talk to the right people and find the right partners.

Innovation Workshops

Regional, in-person, virtual or hybrid

Our workshops are for municipalities, Indigenous communities, municipal networks, academics, and subject-matter experts.

Workshop presenters and participants share information and ask how to best use data, tools and processes to advance action on emerging issues such as climate resilience.

Community Advisory Services

Delivered by partner Open North

Open North provides advisory services and a community of practice to support municipalities and Indigenous communities in the digital transformation space.

The Community Solutions Network is offering data governance assessments to municipalities and communities across Canada with **no-cost to participate.**
